Subject: Tier 3 Bait Station Question
Date: 03/23/2010 11:51 AM

Dan/Bill- For a refillable Tier 3 station, does the station need to be pre-filled or can the first direction for use be to load the station? I skimmed the risk mitigation document and I don't believe it specified. My assumption is that the station does not need to be pre-filled since the label should include directions on how to load. Correct?

Thanks.....
Bo
